

# 2012Sp CS10 Online Midterm Answers

```

Emit Sp12 Fractal L n= n len= len up? up? angle= angle

if n = 0
  turn 90 degrees
  move len steps
  turn 180 degrees
  DrawSp12L len= len Bold= true
  move 0 - len / 2 steps
else
  turn 90 degrees
  if up?
    move len / 2 steps
    turn 90 degrees
    Emit Sp12 Fractal L n= n - 1 len= len / 2 up? up? angle= angle
    turn 90 degrees
  else
    move len steps
    turn 90 degrees
    Emit Sp12 Fractal L n= n - 1 len= len / 2 up? up? angle= angle
    turn 90 degrees
    move len / 2 steps
  DrawLine len= len / 2 Bold= false
  turn 90 degrees
  DrawLine len= len / 2 Bold= false
  turn angle degrees
  Emit Sp12 Fractal L n= n - 1 len= len / 2 up? up? angle= angle
  turn angle degrees
  move 0 - len / 2 steps

```

This if/else controls whether the top L faces up (when up? is true) or down (when up? is false).

The angle is the amount to turn before emitting the lower L.

**DrawSp12L sub-function:**

```

DrawSp12L len= len Bold= bold?
pen down
if bold?
  change pen size by 2
move len steps
if bold?
  change pen size by -2
pen up

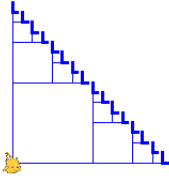

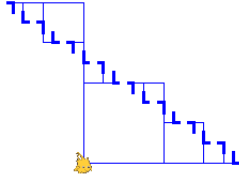

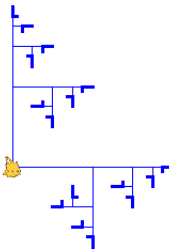

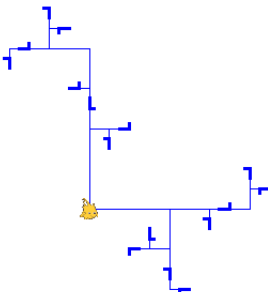

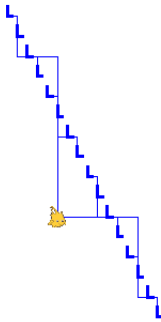

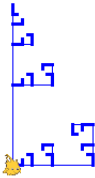

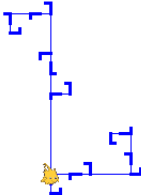

```

**DrawLine sub-function:**

```

DrawLine len= len Bold= bold?
turn 90 degrees
DrawLine len= len / 2 Bold= bold?

```

|  |     | up?   |   |
|--|-----|---|---|
|  |     | true  | False   |
| angle<br><br>(measured<br>clockwise<br>using the left-<br>hand-rule) | 0   |    |    |
|  | 90  |   |   |
|  | 180 |  |  |
|  | 270 |  |  |
