

Quest Review

Fall 2016

Describe what **do something (input)** does in no more than two sentences.

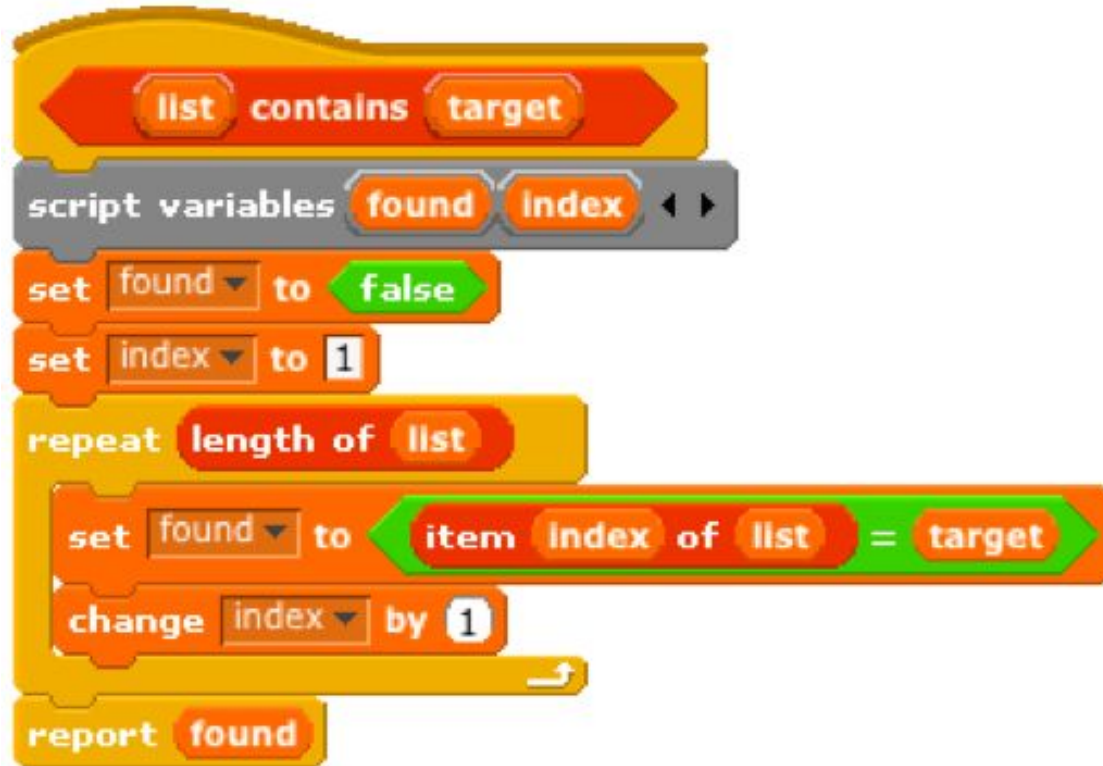

Question 8: *Master of your Domain...* (4 pts)

- a) What can we say about the *Type* of the items of my list? _____
- b) What is the *Domain* of mystery? _____
- c) What is the *Range* of mystery? _____
- d) What are the possible outputs of this combine function? _____

Question 8: We are trying to write a new predicate block that will return **true** when a particular value is present within a list. Unfortunately, there is a bug.

a) Give an example of values of **list** and **target** for which this code works correctly, despite the bug.
